07-08 mars 2022

#SCCE2022

Recommendations for a gender-responsive European Green Deal and EU climate policies

Description :

Today the EU Green Deal remains largely gender-blind, therefore it does not leverage the potential of all EU citizens to contribute to Europe's climate goals. Many policies and instruments can be shaped to take into account the priorities and actions of the whole society. Will we be able to reach the transformative impact needed for a just and inclusive transition towards a sustainable future?

Moderator : Anne Barre, Gender and Climate Policy Coordinator, Women Engaged for Common Future

Speakers :

- **Kata Tüttő**, Deputy-Mayor of Budapest, Chair of the ENVE Commission of the European Committee of the Regions (CoR), CoR rapporteur on 'Gender equality and climate change'
- **Donatella Porzi**, Member of the Legislative Assembly of Umbria, Member of the European Committee of the Regions (CoR), CoR rapporteur on 'The gender dimension of structural and cohesion funds 2021-2027'
- **Gabriele Köehler**, Senior Research Associate at the United Nations Research Institute for Social Development and Member of Women Engage for a Common Future (WECF)
- **Katharina Wiese**, Policy Officer for Economic Transition and Gender Equality

THEMATIC DRAFT PROPOSALS FOR THE IMPLEMENTATION OF THE EUROPEAN GREEN DEAL

N°	Topic	European policy	Proposal
P1	Monitoring		Overarching policies: On top of the gender impact analysis, the EU should set-up mandatory gender monitoring of the effective implementation of all EU Green Deal and Climate policies, with an intersectional approach (collect gender-disaggregated data integrating other social, economic, ethnic, migration status , ability, sexual orientation criteria / use this data in impact analysis).
P2	Cohesion	2023-2024 Work Programme	Link to cohesion: Introduce /promote (mandatory) social and gender equality conditionalities for the Structural and cohesion funds, the EU-GD fit for 55 policies and within the CAP subsidies, so as to support a real equality.
P3	Energy	Revision of the renewable Energy Directive and Energy Efficiency directive	Energy poverty: agree on a common definition of energy poverty that integrates gender and intersectional dimensions / in the housing renovation wave and integrate measures that tackle the root causes of energy/housing poverty and ensures that the costs of thermal renovation does not lead to an increase in renting prices (e.g. gender aware funding schemes as part of the renovation wave and Renewable Energy Directive).
P4	Budgeting	New EU budget lines	Apply mandatory gender budgeting with an intersectional lens at the European, national and local level.
P5	Governance		Include reinforced mechanisms to achieve gender balance in elected representative bodies (at European, national and local level).
P6	Funding		Direct access to EU funding for local governments dedicated to fund public transport policies that integrate strong gender-responsive measures (improving safety, affordability, frequency). The Climate Social Fund should be managed as a part of structural funds, that are of shared management.
