Lost Sponge Capacity – and resilience

- **35% of Europe's wetlands lost since 1970**
- **75% of wetlands in Flanders lost in past ~60 years.**
- **70-90% of Europe's floodplain area ecologically degraded**
- **Wetlands, including mires, bogs and fens among most threatened ecosystems in Europe**

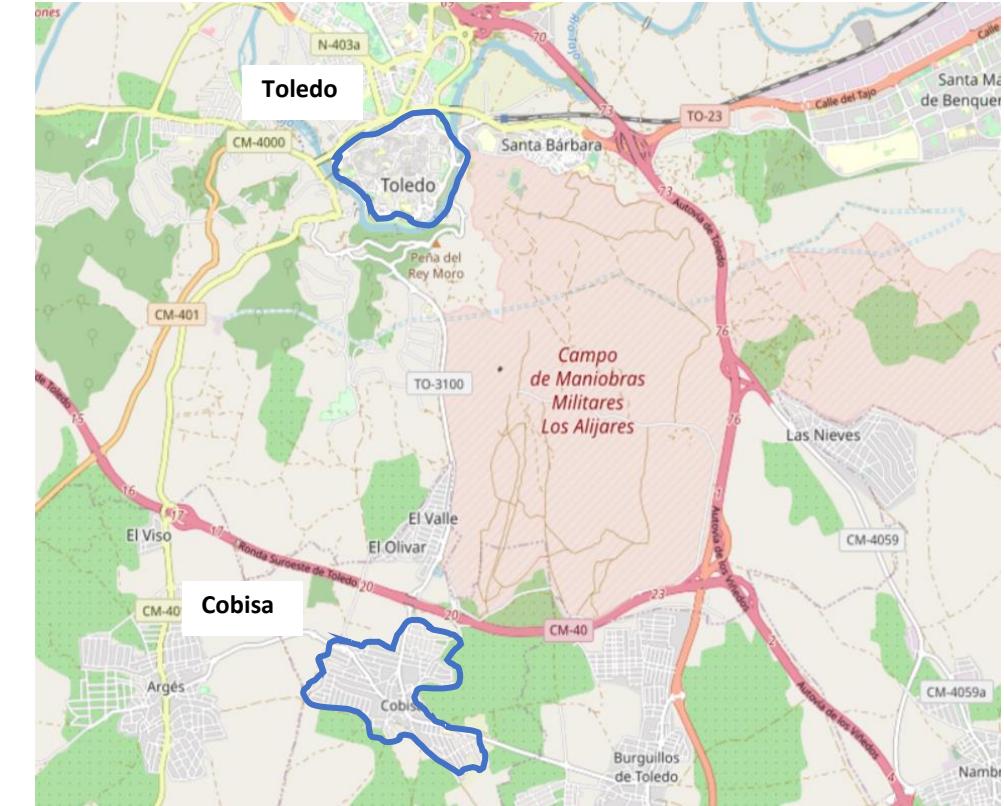

Dana flood event Spain – 3 September 2023

Damages approaching 300 million euros in Castilla-La Mancha, Toledo (UNESCO World Heritage Site)

Including Cobisa, a small village near Toledo

Source: La Tribuna de Toledo

Cobisa land use change

Stream built over – now a street with name of stream!

1956: next to the stream, riverbed respected without building, for horticultural purposes and crops

2023: stream built over

Source: Eduardo Butragueño twitter thread; Google Maps

Germany – Belgium Floods July 2021

- Deadliest flood in decades - 10th deadliest in the past 100 years
- +220 people died in Germany and Belgium
- Most expensive natural disaster in Germany estimated at €35 billion
- Worst devastation upper catchments
- Main Rhine river “hardly affected”

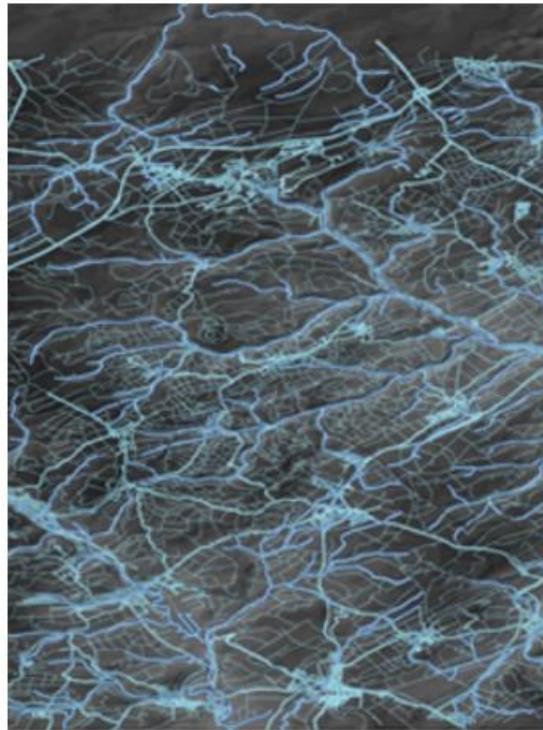

Landscape Factors July 2021 Floods

Rhine & Meuse River Upper Catchments

58% of the upstream land area contributed 89% of the peak discharge downstream

Drainage contributed disproportionately to peak floodwaters downstream

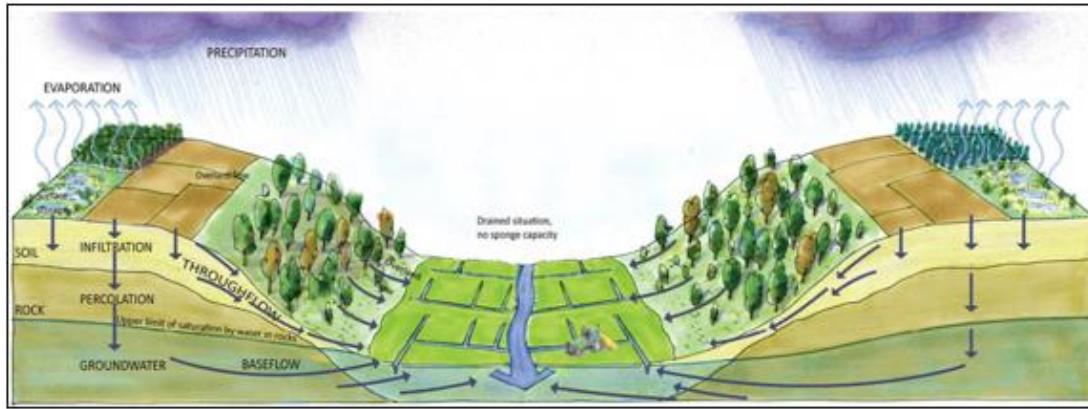

Paved surfaces were the main rivers channelling floodwaters downstream

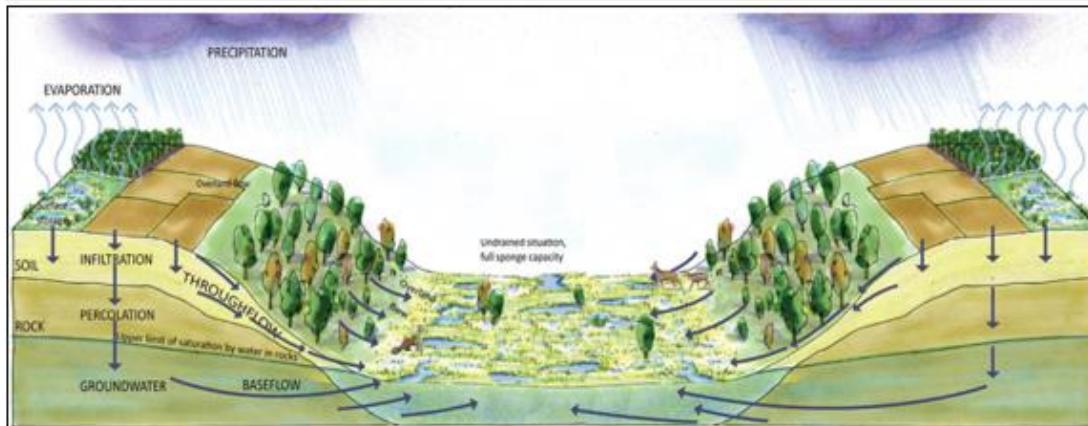

Bare soils were a major contributor to floodwaters

Natural Sponges for protection against floods droughts

Upper Catchments

Current
Man-made drainage,
fast water discharge

Restored
Slow infiltration
and discharge

Natural Sponges Research

Micro Catchments, Macro Effects

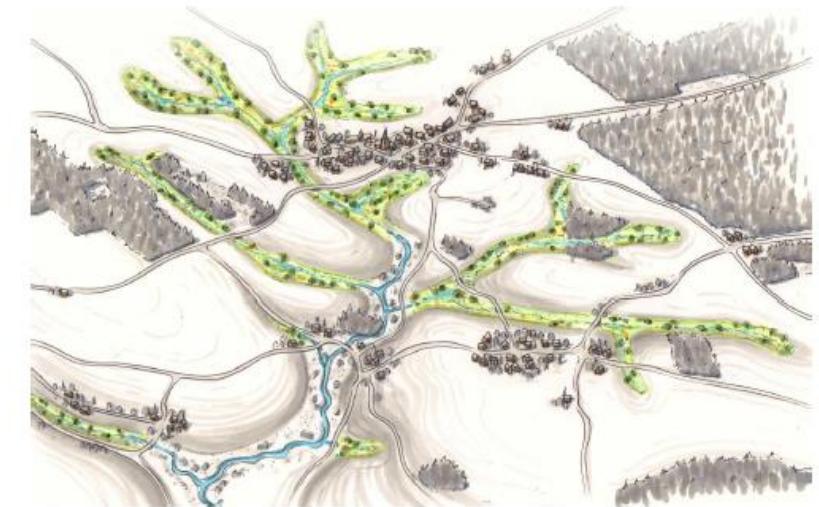

- **Peak flow reduction:** up to **35%** at local scale (2% international)
- **Dry periods:** 10 - 30% higher baseflow
- **Water quality:** Retention of nutrients
- **Carbon Farming:** CO₂ storage
- **Biodiversity:** improves status species and habitats

Measures could benefit 125,000 km² – when restoring 6% of upstream areas

Germany, France, Belgium and Luxembourg

Micro Catchments, Macro Effects

Natural retention in the Rhine catchment as a nature-based solution for flood risks, drought control, biodiversity restoration and climate challenges.

Horizon Europe Project Rewet

Open Lab Site Belgium – on the ground restoration

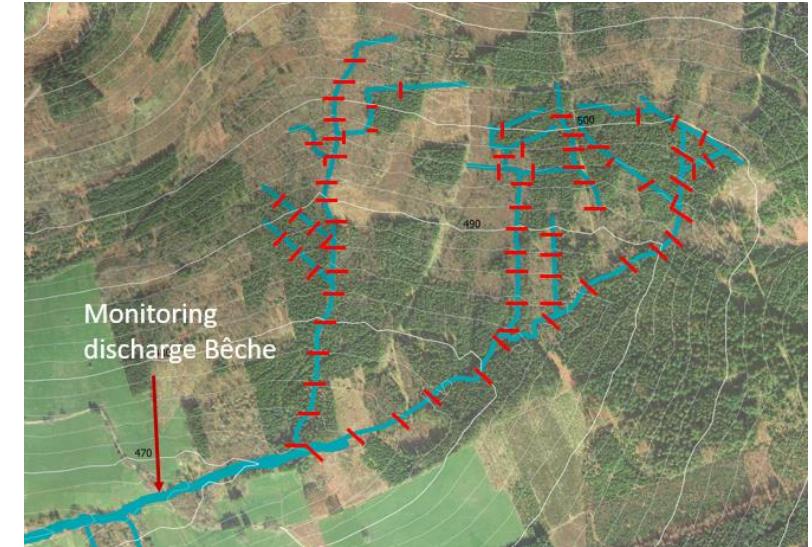

Stream Bêche

- Amblève catchment, Meuse River, watershed of 2 km²
- Drainage channels to support plantation forestry

Measures

- Blocking drainage channels with wood debris and soil to slow flows & raise riverbed

<https://www.rewet-he.eu/>

EU level action needed

Water Resilience & Adaptation to Climate Change

Collecting signatures from Associations for a Joint statement to EC on Initiative for Water Resilience

Proposed EU Water and Climate Resilience Law

- EU water reserves for catchments in stressed areas
- Sponges Financing Facility
- Water efficiency and abstraction targets covering all users

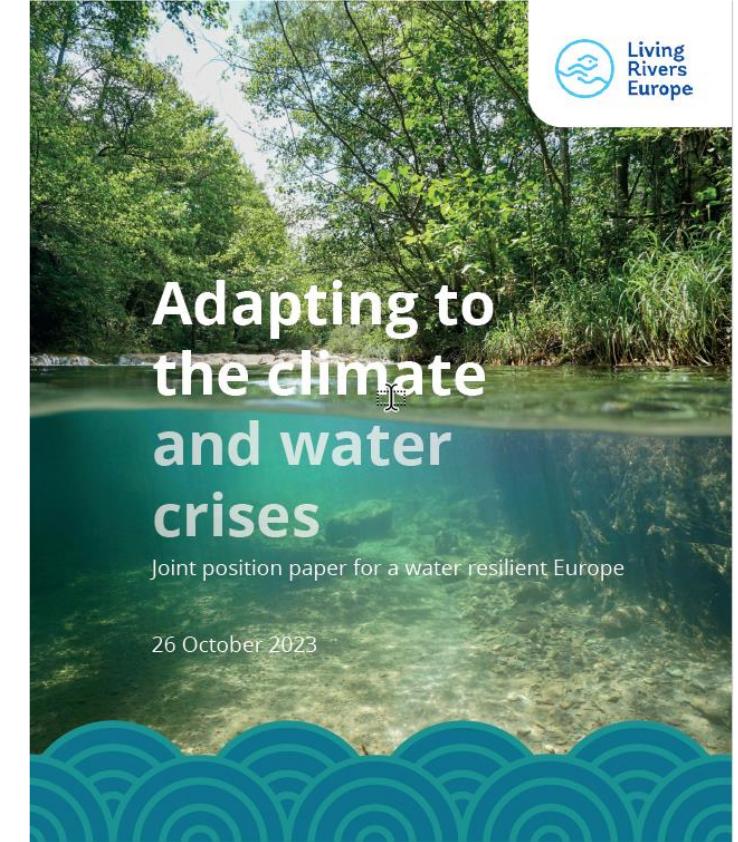

A fully implemented Green Deal

- Adoption Nature Restoration Law – national plans enhance adaptation

Climate Adaptation Proofing all new legislative & non-legislative acts

Full enforcement & implementation of Water Framework Directive

Elimination of harmful subsidies – including continued drainage of wetlands

Thank you!

MERCI POUR VOTRE ATTENTION

Claudia Niessen

Bourgmestre d'Eupen

20.082 habitants

103,7 km²

Le changement climatique nous est tombé dessus.

Ce sont les crises qui nous montrent une fois de plus que nous ne pouvons pas continuer comme avant.

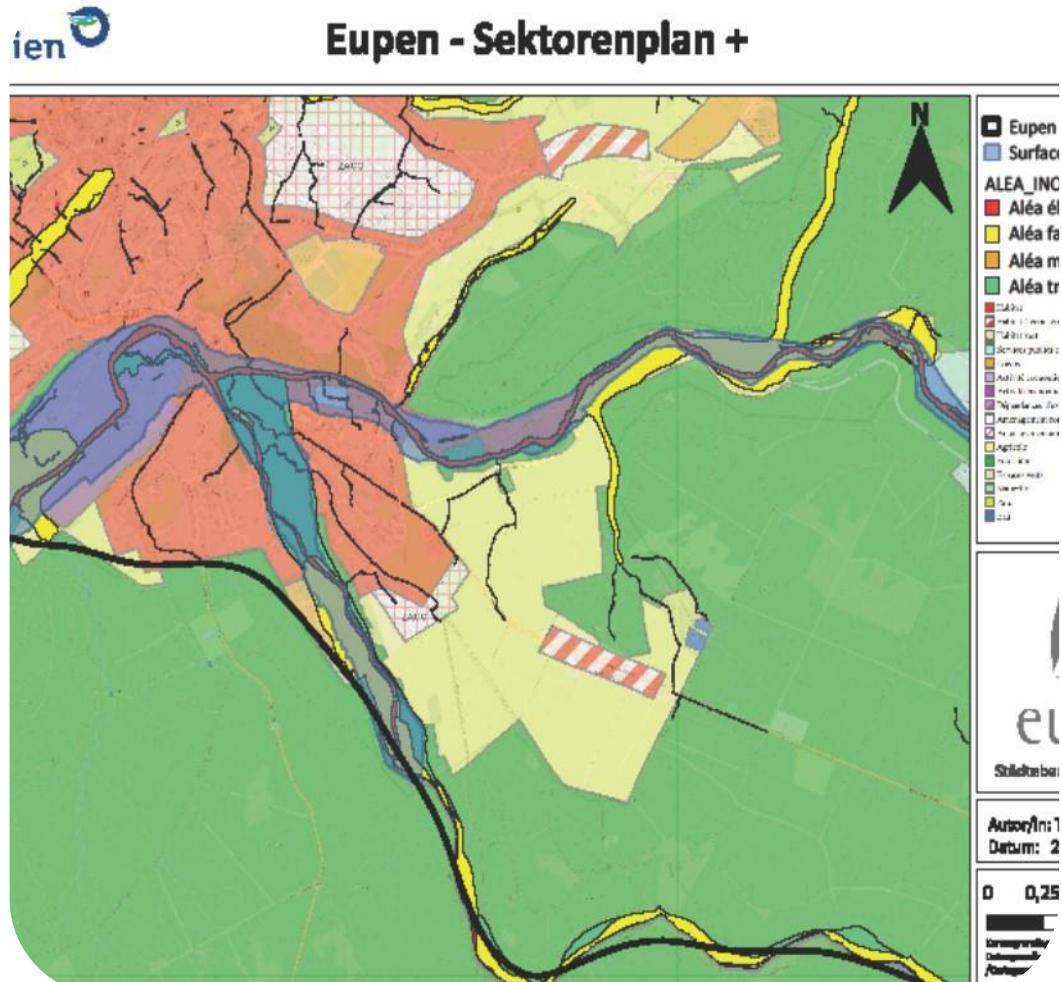

14 juillet 2021

Bilan

- **500+ ménages touchés**
- **12.000 m³ de déchets en l'espace de 2 semaines**
- **1,62 millions d'euros attribués sous forme de dons**
- **250 personnes accompagnées dans la recherche d'un logement**

Infrastructures publiques

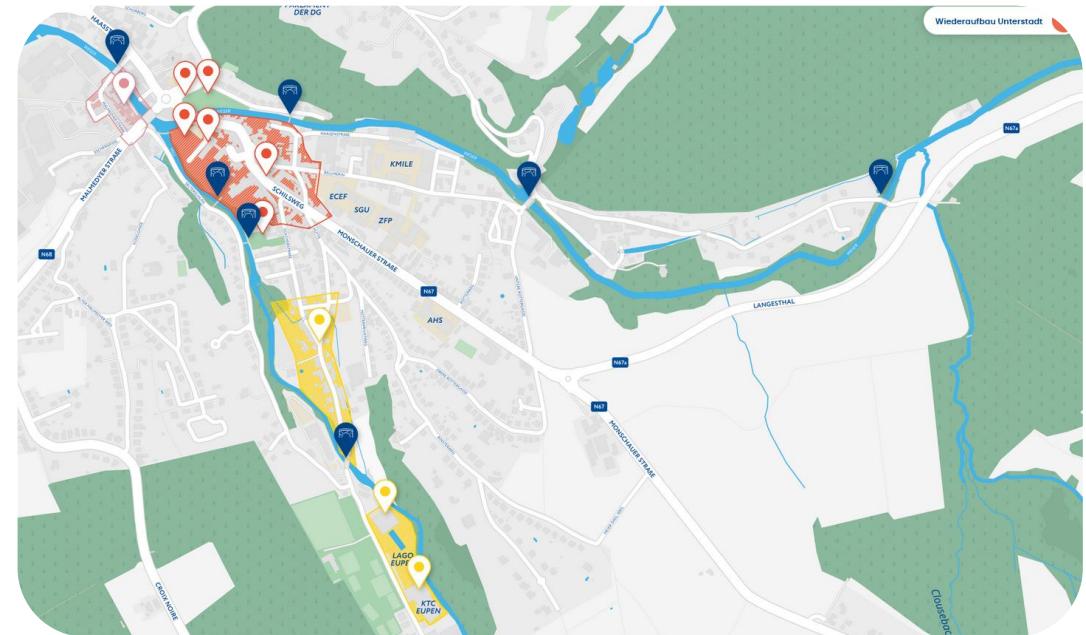

- **12 bâtiments communaux (hall de sport, piscine, maison du quartier ...)**
 - **20 tronçons de rue et 8 ponts**
 - **3 parcs et 9 fontaines**
 - **26 tronçons de canalisation**
 - **équipements (éclairages ...)**

Comment reconstruire rapide et/ou durable ?

- distinguer le secteur privé du secteur public
- mesures provisoires
- mesures à court terme lors de la reconstruction
- réflexions stratégiques à long terme

Reconstruction de la ville basse à Eupen

Aménager les espaces publics

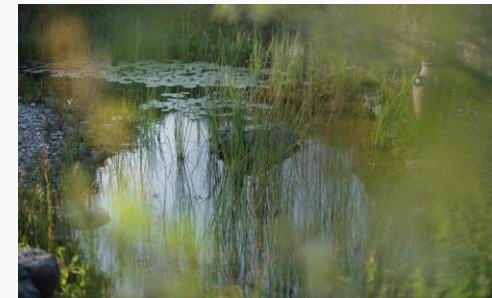

désimperméabiliser
et végétaliser

enlever les obstacles

donner de l'espace à l'eau

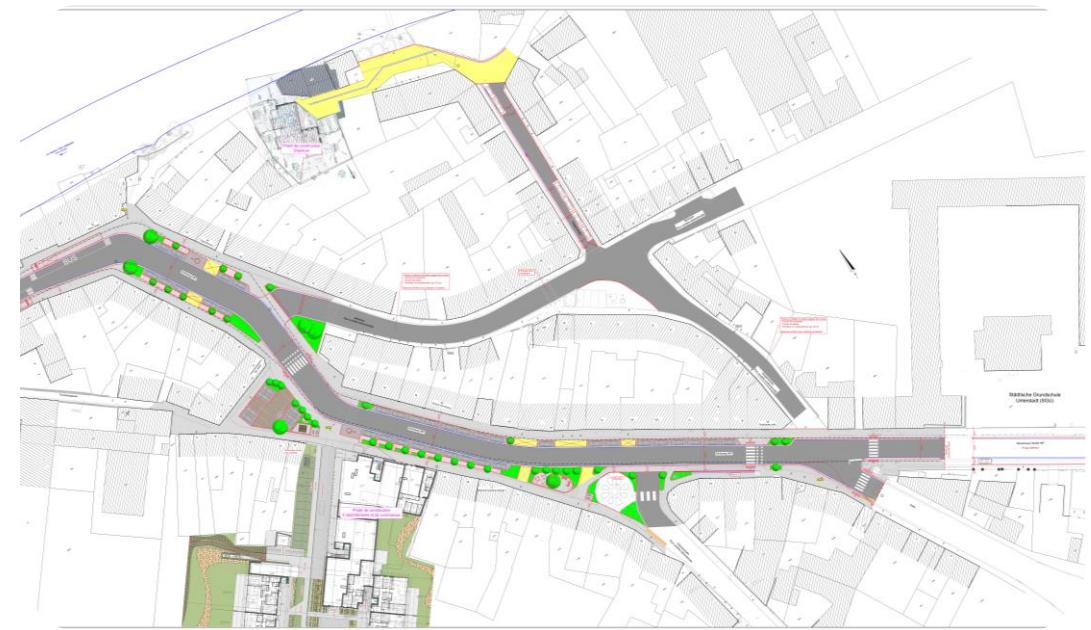

Désimperméabiliser et végétaliser

Malmedyer Straße

Désimperméabiliser et végétaliser

Schilsweg

Enlever les obstacles

ponts et seuils

Donner de l'espace à l'eau

Scheiblerpark

„Scheiblerpark“ parc urbain

- **8.000 m² de zone verte basée sur la nature**
- **20 arbres supplémentaires plantés pour créer une trame végétale adaptée au milieu**
- **des îlots végétaux en faveur de la biodiversité**
- **qualité de vie pour les habitants du quartier**
- **corridor vert plus résilient en cas de fortes pluies**

Scheiblerpark

La nature est notre alliée !

- Il est difficile de libérer des terrains bâtis.
- Où pouvons-nous encore construire et comment? C'est la question qu'il faut poser.
- Les plans de secteur actuels ne fournissent pas de réponse.

Call for an EU Blue Deal

Violeta Jelić

EESC member

Table of contents

01.

Context

02.

The EESC takes
action

03.

Follow-up strategy

Context

- Increasing water challenges around the world and also in Europe; Implications for economic, social and political stability.
- The water dimension in EU policies is sometimes neglected, often fragmented and is not yet fit to address the challenges ahead.
- The EU is currently not on track to achieve the Sustainable Development Goals linked to water.
 - 9.8 million people in the European Union do not have access to safely managed drinking water on their premises,
 - 6.7 million people in the EU live without sanitary facilities.
 - Water leakage rates in some EU countries reach up to 50 per cent.
- A change of scale is urgently needed

The EESC takes action

- In October 2023, the EESC presented its **call for an EU Blue Deal: a new water strategy for Europe**, based on a set of own-initiative opinions + Declaration
 - Consider water as a strategic priority for the EU
 - EU Blue Deal should be a standalone policy, on a par with the EU Green Deal
 - EU Blue Deal should be in full complementarity to and in synergy with the EU Green Deal and the UN Sustainable Development Goals
 - Calling for the water dimension to be embedded in all EU policies
- The President's **Declaration for an EU Blue Deal** recaps the 15 principles and 21 actions framing the EESC call. It underlines the need for a more comprehensive and strategic approach to water in the EU.

Follow-up strategy

- Objective: to set the **Blue Deal as a strategic priority of the next Commission**
- **Joint effort with EU institutions:**
 - Since the start, close collaboration with the **European Parliament**, including a joint letter with the EESC and 36 MEPs to all EU Heads of state and government, calling on them to support an ambitious EU Blue Deal.
 - Complementary work with the **Committee of the Regions**
 - Continued work with **Member States**, international organisations (EIB, UN, FAO...)

- A lot of positive engagement from **stakeholders** and organised civil society as a whole.
- Water will be an important topic in the political agenda of the European Elections campaign, particularly for young generations.
 - 6 March Civil Society Week event with Volonteurope and EEB on the Blue Deal and youth participation
 - Contribution to EU Green Week and the upcoming campaign on Europe's water future
- Further **EESC opinions** on the Blue Deal in 2024
- EESC fully committed to **set the Blue Deal as a strategic priority of the next Commission**
